Extensive size range for a complete system

PassPort divider creates divided channels to aid in suture management (compatible with the 12 mm diameter only)

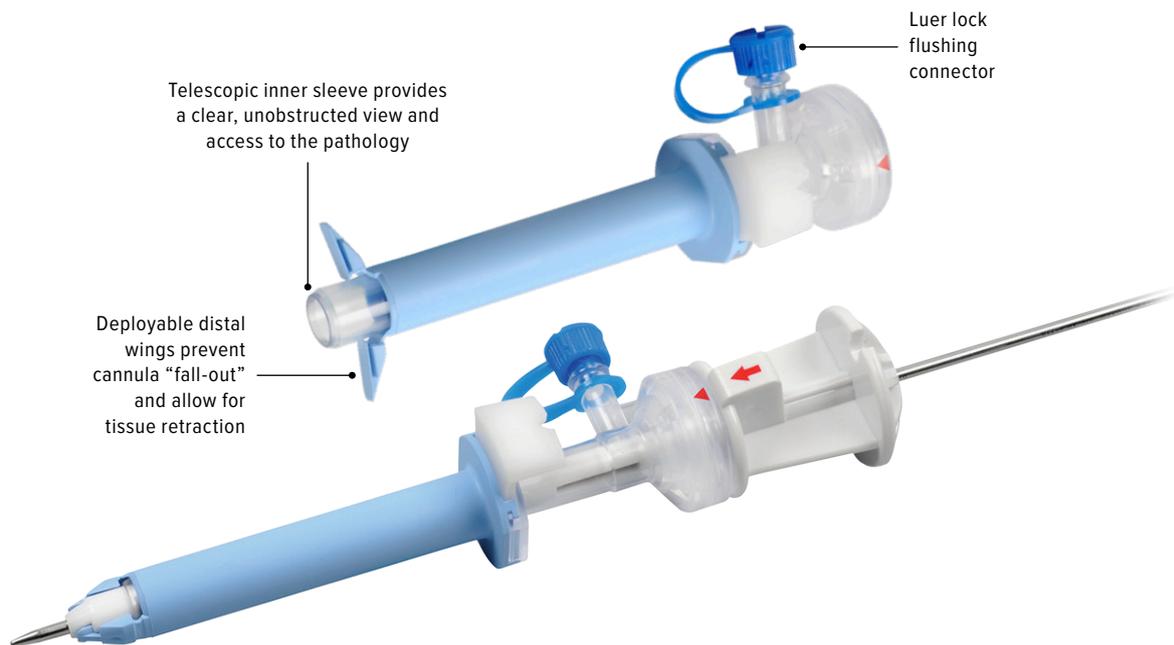

Optional auxiliary lumen provides additional channel for NanoScope™ instruments or suture management

Easily introduced using the PassPort inserter or a curved hemostat

Gemini™ SR8 Cannula

The expandable Gemini SR8 cannula is ideal for joint access while using instruments during Bankart, SLAP, and rotator cuff repairs.
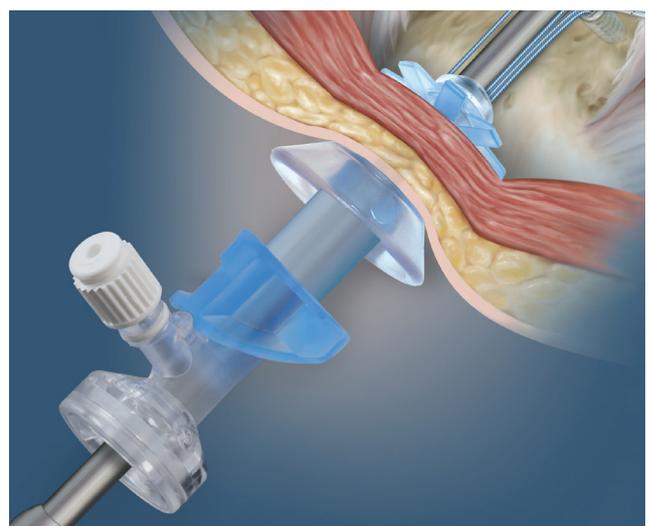

Telescopic inner sleeve provides a clear, unobstructed view and access to the pathology

Luer lock flushing connector

Deployable distal wings prevent cannula "fall-out" and allow for tissue retraction

Expanula™ Cannula

The Expanula cannula makes arthroscopic rotator cuff repair easier by increasing the workspace and view of the subacromial space.

- 28 mm diameter expanding distal fan collar creates a stable portal, preventing cannula loss, and can be used to retract the deltoid
- Includes a "no-squirt" cap

Triple-Dam Twist-In™ Cannula

The Triple-Dam cannula is an adaptation of the original Twist-In cannulas with the same working lengths and inner diameters.

■ Side inflow/outflow port with a luer lock connection and valve switch to control fluid flow

Inner two dams maintain fluid pressure for clear visual fluid environment

Outer dam dissipates the fluid pressure to help minimize squirting
